THE WAVE

THE WAVE

The wave is a unique structure, designed to meet the demand for large clear spans, it's available in widths up to 70 meters.

The modular construction allows the wave to be manufactured at any length (in 5m increments).

The vast size creates an excellent acoustic performance, making it the perfect ally to host major events.

Besides the large dimensions, this structure has a huge loading capacity, of up to 2 tonnes per arch, while maintaining the safety and stability of the structure.

The wave is the result of state-of-the-art technology and design combined with our experience.
